## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, and 25-30, drawn to a method of producing a non-aqueous electrolyte secondary battery and mounting of the non-aqueous electrolyte secondary battery onto a circuit substrate, classified in class 29, subclass 623.1.
  - II. Claims 12-24, drawn to a sealant of rubber-based adhesive with asphalt, classified in class 525, subclass 54.5.
  - III. Claims 31 and 32, drawn to a non-aqueous electrolyte secondary battery, classified in class 429, subclass 174.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and Group II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 1-11 do not recite a solution of rubber-based adhesive and asphalt in the battery. The subcombination has separate utility such as sealing the shingles on a rooftop.

3. Inventions of Group I and Group III are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as

Art Unit: 1745

claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a different method such as heating at a temperature range below 150 °C or making the battery without using caulking such as crimping the can and welding the can which involves a heating step.

4. Inventions of Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not capable of use together because the fully assembled battery of Group III and a sealant of Group II are not usable together since the fully assembled battery of Group III does not recite the use of a sealant and the fully assembled battery is used to generate electricity and a sealant is used for sealing purposes.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1745

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
